Familiar: Better Auth, React Router, Zustand, Firebase.

Projects

◇ **Libris: Full-Stack Book Tracking Platform • May – June 2025**

A full-stack platform designed for simplifying how users track, discover, and share thoughts about their favorite books — *inspired by AniList*.

Key Features:

- Track books, write reviews, and interact with others via likes/comments.
- Follow users, share posts, and get real-time notifications.
- Custom reading lists, profile customization, and settings control.
- Import/export book entries and custom reading lists across accounts.

Things I Learned:

- Integrated Better Auth during mid-development without compromising the deadline or slowing the process.
- Designed efficient Prisma schemas to handle user, book, and list relationships.
- Learned how to deliver a responsive, production-grade application and work in large codebase.

Tech-stack: TypeScript, React.js, Next.js, Prisma ORM, MongoDB, Better Auth, Zustand, Tailwind CSS.
